

Military Rank

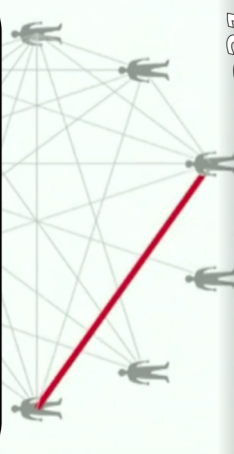

<https://0x8.ch/HackersCardgame10>

Inventor: Satan / Romans? Year: ~500

People tend to subjugate other people and making them "usable" for their own profit. Globally there are many of such systems that use things like dt1 card to enslave people. Right-Wing people seem to thrive in Military Systems. Maybe not even by their own will but they have had maybe dominant parents and learned that it is liked with less pain if they just do what the older person says. I myself was always rebel and began early to question things the older generation said. This way I went is possibly more painful since you must defend against the older generation and consider that the younger that help those older and obey their order attack you from two sides. And it would not be fair to be mean to the younger.

F=TVS_r Equation for intelligence

<https://0x8.ch/HackersCardgame10>

Inventor: Alex Wissner Gross Year: ~????

In my opinion hierarchical systems are bad (a13) so there would be alternatives, for example the equation you see in the title. For example this algorithm would provide that no sheep gets lost (m68) if one would implement it in society, social systems, facebook, twitter...

I studied Computer Science some years but for me it is so complicated to implement it.

https://www.youtube.com/watch?v=ue2ZEmTj_Xo
https://www.ted.com/talks/alex_wissner_gross_a_new_equation_for_intelligence
Really great work, but maybe you could work on your **Entertaining Skills** and see a **fashion consultant**, but **i've only seen this one video, maybe i'm wrong**.

Language Level Detection (nasty filter rule)

Ihre Antwort ist bedeutungslos. Wir wissen nichts. Wir registrieren, berechnen und ziehen unsere Schlussfolgerungen.

<https://0x8.ch/HackersCardgame10>

Inventor: xxxxx Year: ~????

There are algorithms to find out about the language level of the person who wrote that text. For example if the text was written by a **second grade student** or by a **language professor**. It seems that satan took this algorithm and used it as filter algorithm that filters communication above a specific language level. For example for **filtering communication over t1 or t12 card**. This would have effect that especially intelligent people would be handicapped in "unseen university" (Terry Pratchett) while the less educated people would have no problems to communicate with each other. Unsure if bug or feature (preventing m40 card). But in a fair world all or none should have that filter. But it definitely **wastes our time** and makes us **crazy** and **low self-esteem**...

PATTERN RECOGNITION

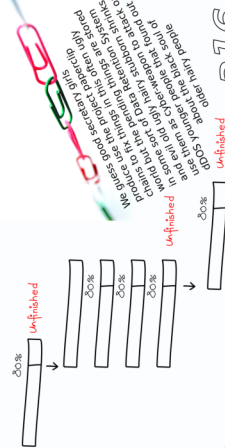

<https://0x8.ch/HackersCardgame10>

Inventor: Norman Joseph Woodland and Bernard Silver Year: ~1949

don't trust QR-Code Apps that much

Procastinate when 80% solved

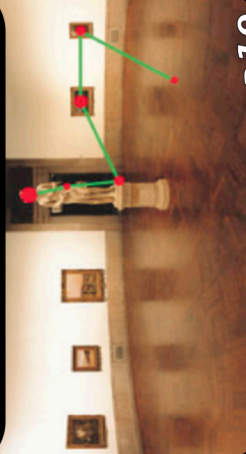

<https://0x8.ch/HackersCardgame10>

Inventor: xxxx Year: ~????

Algorithm on my "computer" when i try to do things to fix things to finish relevant business. There are problems like extending pain-usb with uidk2 where **unknown** starts an algorithm, that prevents me from solving the problem. The algorithm starts tons of new problems that are also relevant. I try to solve them all but always when i solved 80% of a tasks, the next problem opens or even starts a suicide death bot (a16) against me. Prevents that problems are finally being solved. There are some sort of "resonators" (Ingress), that prevent the whitehat hacker / whistleblower from solving it. Resonators maybe just other people that are being activated. If these are real people they are maybe being activated with Bigdata from the NSA / CIA Data Retention System that would prove earlier sins of this human(?) "BOTS". Mathematically spoken possibly / partially transitive. t1... transmuts now "this is non-solvable problem, hahaha" (= psychological warfare)

PSYCHOLOGICAL-PROFILE FROM EYE-MOUEMENT

<https://0x8.ch/HackersCardgame10>

Inventor: xxxxx Year: ~????

If you have something like google glasses, a retina-CCD Chip one could easily enumerate and footprint the psyche / the soul of the victim. if you would have at least 2 RFID chips on your head, or easier two LC-Cirquits on your head and a 3D model of the room, one could create such a profile.

I make this card neutral, because it could be used for good and also for bad.

Worst case they use such things to create at1 cards...

Bijektivitaet REVERSIBILITY

Die Funktion $f: \mathbb{R} \rightarrow \mathbb{R}, x \mapsto x + a$ ist bijektiv mit der Umkehrfunktion $f^{-1}: \mathbb{R} \rightarrow \mathbb{R}, x \mapsto x - a$.

REVERSIBILITY

Top! kindly please his mistresses to look him down when he forgets to play this Card

<https://0x8.ch/HackersCardgame10>

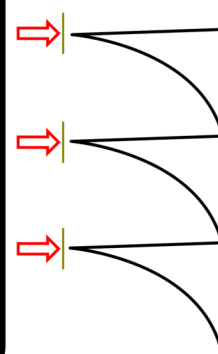

Inventor: Good Year: ~????

If you need to **punish someone** then do it **bijective**. Best thing is not to attack a person **physically** or in the **mainframe**, or with **cyberwar**... **you could risk his or your life**. There are seldom cases, for example if they want to (cyber-) [rape | attack | your girl...], in this case it is possibly ok to **defend yourself** and **younger** against the offender. Keep in mind that you defend yourself **without causing permanent harm**. Maybe the offender is **remote controlled**. See cards t1... t*

If there is something like death sentence for example in Texas then and would kill an innocent you would find that out to late, then the whole state could sentenced to death to. In Switzerland there are no official death sentences.

Efficiency Detection

<https://0x8.ch/HackersCardgame10>

Inventor: ~??? Year: ~????

When i work with my computer there seems to be an algorithm that detects when my work is efficient and then stops me with dirty tricks...

The problems are not always in the same order, but efficiency seems to be an eventtrigger that starts such things smoke1, m98, m99, acid in my face cream...
